# Image Loader 1.5 Overview

Gilles Brûlé – February 2011

# Image Loader

ingenico

- Image Loader is a terminal application managing Idle Screen, dedicated to Telium colour terminals.
  - Fixed images display
  - Diaporama (light animations)
- Easy handling thanks to Menus
- Load images from USB key, SD card or TMS.
- Any action on the keyboard stops the displaying and lets the terminal perform its normal payment operations.

Make color deployment easy

# Make your idle screen alive with Image Loader

ingenico

- Display a series of screen images to even more catch attention

# Push Brand recognition

ingenico

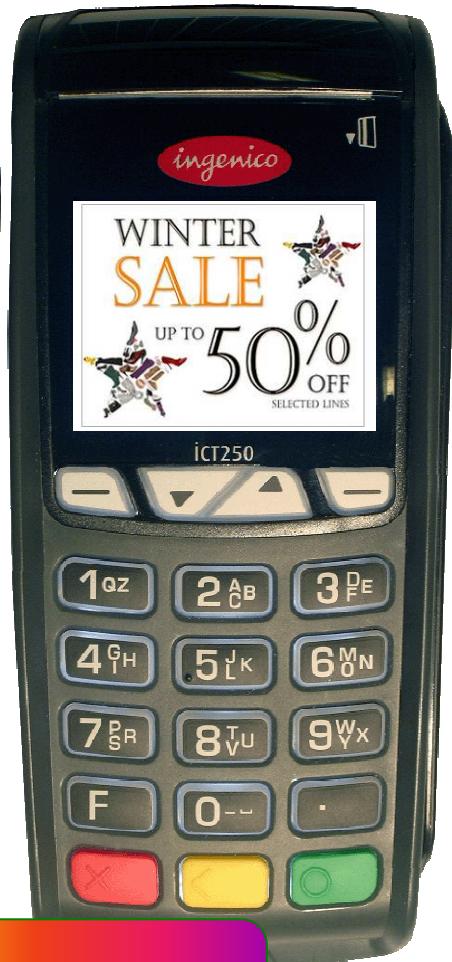

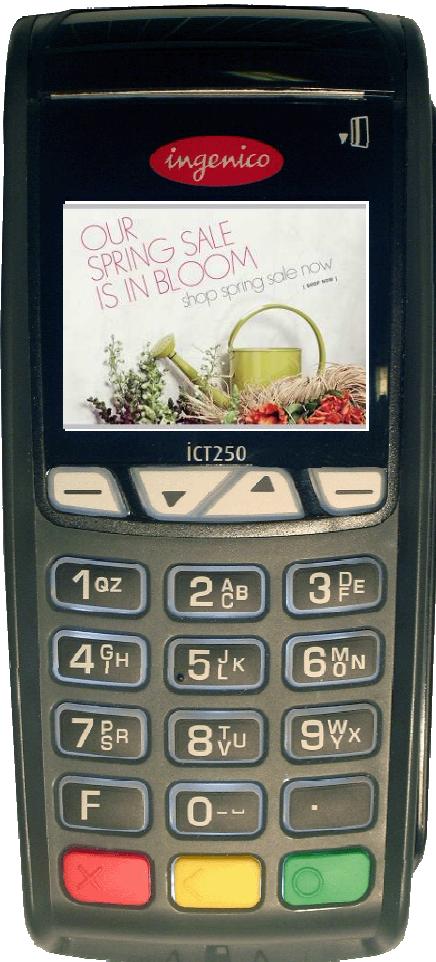

Define your screen saver

ingenico

# Push Promotional campaign

ingenico

Make screen saver evolutive

ingenico

# What images ?

ingenico

- ▶ All BMP, JPG, PNG images are supported
- ▶ automatic resize inside the terminal
- ▶ use Image Optimizer
  - for optimal performances
  - to avoid distortions,
  - for memory space savings

# New features of 1.5 release

---

ingenico

- Define display duration of each image of the diaporama independantly of the others
- Multiple animations : store various animations onto the terminal and select through user interface
- Up to 500 images per animation
- Load animations from TMS
- iPP3 and iSC support
- User can define his idle screen from µSD card without copying images to the Terminal
- Optional password protection : Idle screen modified only by authorised person

ingenico

# Deployment

---

ingenico

- ▶ Contact support for software availability
- ▶ Terminal constraints
  - SDK 7.4 at least
  - Some extra DLLs must be loaded for JPG and PNG support
  - “SCREEN.INI” must not be activated for “IDLE\_COLOR”
  - No other application in the terminal registered to IDLE\_MESSAGE with higher priority
- ▶ See User guide for more details:  
ICO-AMA-003-IN-EN Image Loader User Guide
